VU-CHAIN

COMPANY PROFILE 2023

YOUR PARTNER FOR DIGITAL SOLUTIONS

VU-CHAIN

ABOUT US

The company has been recently going through a technical, strategic and operational evolution that gradually took the group to focus on three new core businesses. These are apparently different and distinct from eachother but, in reality, they belong to the same macro area. Digital Tranformation, Innovation, and Modern Technologies. In particular, the new core businesses are the following:
- NFT-Project Managment, Community Creation, Analytical Skills and Competences Development
- Blockchain Certification System
- Bitcury

VU-CHAIN

MISSION

Our mission is to empower businesses and individuals to harness the potential of the digital age through the strategic utilization of Non-Fungible Tokens (NFTs) and Distributed Ledger Technology (DLT). We are committed to driving innovation, enabling secure and transparent transactions, and redefining the way assets are created, managed, and exchanged in the digital realm.

Our Core Values:
1. Innovation and Digital Transformation
2. Security and Trust
3. Accessibility
4. Sustainability and Eco-friendly Practices
5. Partnerships and Alliances

VISION

We envision a future where NFTs and DLT are seamlessly integrated into everyday life, revolutionizing how assets, identities, and information are managed. Through our leadership and expertise, we aim to drive this transformation, making it easier, safer, and more inclusive for all to participate.

How We Fulfill Our Mission:
1. NFT Creation and Management
2. DLT Solutions
3. Education and Training
4. Consultation and Customization
5. Eco-friendly Initiatives

VU-CHAIN

BLOCKCHAIN PLATFORM

The first platform in the world which helps certify and verify the service and network integrity of the whole carrier chain. The platform is running a real time anomaly detection along the entire carrier chain, and the use of the blockchain network helps ensure the veracity of the call, the anomaly detection and proof of network and service abuse along the whole carrier chain.

The service has been created thanks to Giovanni Ottati, the CEO.

For these reasons, the company has also decided to offer the new platform as a stand-alone service to any mobile and fixed telecom operator aiming to reduce or eliminate any network and service abuse occurring in the service provisioning of international calls.

As a stand-alone service, Vu-chain is supported by the following components:
- Artificial Intelligence support systems (AISS): own made algorithms to get real time data monitoring and anomaly detection;
- Distributed Ledger Technology (DLT): data are registered through the worldwide blockchain network, as a "single source of truth".
- Combined processing of the AISS and DLT, to control the network and service integrity and transparency within the entire carrier chain and prevent fraudulent calls.

The certification of telephone call using the blockchain network combined with own made algorithms for anomaly detection reduce and most likely eliminate any network and service abuse along the whole carrier chain.

NFT WORLD

We offer end-to-end solutions for NFT creation and management. Our services encompass every aspect of NFT development and administration, ensuring a seamless experience for our clients. From the initial creation of unique NFTs to their secure management, integration with marketplaces, and adherence to legal and regulatory requirements, we provide a comprehensive suite of services to meet all your NFT needs.

NFT Project Management

Developing and implementing an effective strategy able to maximize the launch of your product providing the necessary insight and support in order to succeed.

Community Creation

Ability to understand the cornerstones at the base of your project proposition and find a group of people/companies that can be potentially attracted by its benefits.

Analytical Skills and Competences Development

The skills not only help you become NFT expert but also find a solid command of the technical and business aspects of NFTs. Interestingly, the rewards for investing efforts in NFT training can also help you find motivation.

BITCURY.IT

Bitcury is a tailor-made platform created for people who love sport, vintage, comfort and luxury cars. Therefore, it is the first marketplace for new, used, Km.0 and vintage cars inside which there will be only the most relevant car models of each brand. Bitcury additional objective is to gradually grow in the market, building a car lovers community able to interact on a daily basis, within a platform entirely dedicated to themselves. Cars represent a large portion of the current worlwide market, for this reason, Vu-Chain decided to open a business of this type.

Post your car announcement!

BITCURY

NODI JEWELRY

Vu-chain established a partnership with «Nodi Jewellery» which has 7 stores based in Italy. Our company provides the jewellery an NFT collection based on Solana blockchain, in order to let NODI make a significant transition into Web 3.0. The customers who purchase a jewel in NODI's stores will receive an NFT representing that jewel, linked to a digital certificate that will show all the main attributes and features of the jewel. This certificate replaces the traditional paper warranty certificate and since it is registered on the blockchain, it is authentical and unchangeable

ORUS X

The project is about the creation of an exchange platform for trading gold with NFTs and cryptocurrencies, which would represent an innovative platform in the current worldwide market. Metal Trading Company, through Orus X NFT's collection, will create the world's first platform for the direct exchange between crypto and gold with the option to store the precious metal and receive it physically quickly and stress free, all this with a full guarantee on its provenance and quality. Vu-chain has the role to launch the NFT collection in order to collect potential investors for the project. The objective is to get a certain amount of capital to finance the launch of the platform.
